HUGS Protocol definition

	Revision	Date	Description
Revision	1.0	4/13/2020	Original
	2.0	5/8/2020	Change to Little Endian. Change to metric speeds. (mm/s)
		_ / /	

	2.0	5/6/2020	Change to L	ittie Endian.Ci	lange to met	ric speeds. (ii	1111/5)				
	2.1	5/14/2020	Add new M	otion Respons	e with Veloci	ity, Position, I	Power.				
Note: HUGS use	c a hinanı fa	rmat rather tha	an an ACCII ch	aracter forms	t so it is not.	diractly prints	ahla				
Note: All HUGS	•	•			•						
Note. All 11003	iluiti-byte ve	ilues are serit as	s iittie-eiiuiaii	. That is, the i	.3D 13 3CH HII 3	st and the ivid	ob selit last.				
	0	1	2	3	4	5	L+4	L+5	L+6	L+7	
Send/Rec	ВОМ	LEN	DEST/SEQ		RSP ID		DATA: LEN Bytes		RC	EOM	
,				_	<u> </u>	l	•			1	
BOM	Beginning	Of Message Ch	naracter:	Slash	"/"						
LEN	Length of	variable Data.	0 - 0xF7								
DEST/SEQ	LSN (Lowe	er 4 bits) TARGE	T Identifier.(0-15	0x0 = HOST	, 0xF = ALL					
	MSN (Upp	oer 4 bits) Mess	age Sequence	e. Cycles throu	ıgh 0-15						
CMD_ID	On a com	On a command, this will be the required action. Indicates how to interpret variable data section									
	On a resp	onse, the CMD_	_ID will be RSI	•							
RSP_ID		•	•	equired Response: Indicates what data should be returned.							
		onse, theRSP_II					se.
